## In the Claims:

Please amend claims 31-34 as follows:

Claims 1-30 (Canceled)

- 31. (Currently amended) An isolated <u>mammalian</u> adipose tissue-derived stromal cell that exhibits at least one characteristic of a non-adipocyte cell lineage.
- 32. (Currently amended) An isolated <u>mammalian</u> adipose tissue-derived stromal cell in combination with a substance that promotes differentiation.
- 33. (Currently amended) The <u>cellsubstance</u> of claim 32, <u>wherein said substance</u> that promotes differentiation is selected from the group consisting of ascorbic acid, ascorbic 2-phosphate, bone morphogenetic proteins, [[or]]  $\beta$ -glycerophosphate, or any combinations thereof.
- 34. (Currently amended) A cell isolated from <u>mammalian</u> adipose tissue, <u>wherein said cell that</u> is adherent and has been induced to express at least one characteristic of a non-adipocyte cell lineage.
